

Enclosure Overview

- Enclosures
- Junction Boxes
- Modular Cabinets
- PC and Rack Enclosures
- Freestanding Consoles
- Stainless Steel Solutions
- Specialty Products

OUR AUTOMATED MANUFACTURING FACILITIES ARE THE FOUNDATION TO OUR SUCCESS!

We manufacture our enclosures and cabinets using customized systems and CNC machinery. The loading of raw sheet metal takes place in our central warehouse, then for production, painting and assembly processes, it is carried throughout our state-of-the-art facilities, providing the means to program and organize the working cycle utilizing lean manufacturing concepts. Throughout their production cycle, the enclosures and cabinets undergo the following sheet metal machining stages:

Cutting and Punching

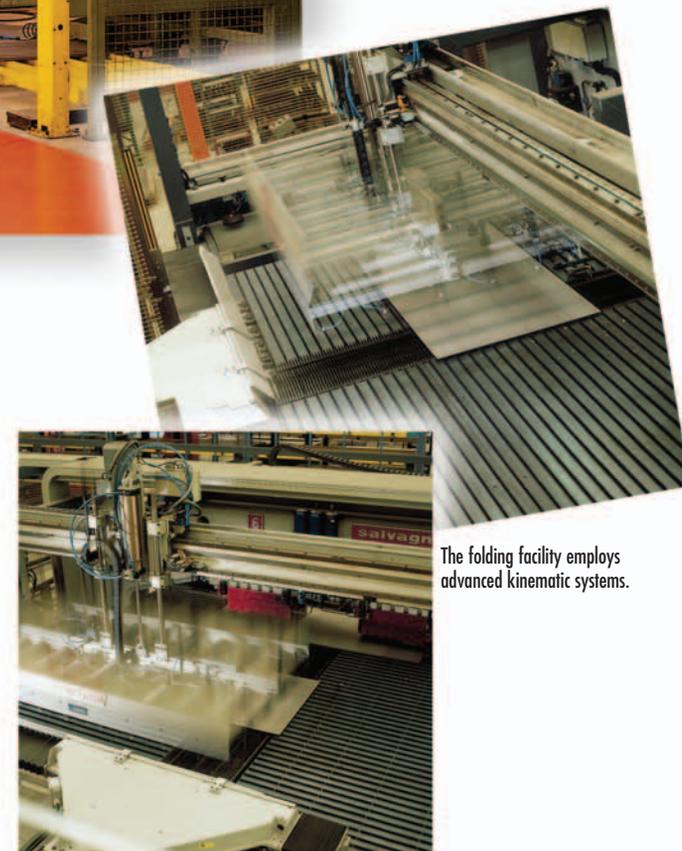

After observing stringent quality control procedures, the sheet metal foils are lifted by an automatic stocking system and fed to the CNC machines, where they are cut and punched according to the programmed working cycle.

The sheet metal coming from the automated storage bay is conveyed to the first machining sections: punching and cutting.

Folding

After cutting and punching the sheet metal for the final product, the folding stage is then started. Different robotic devices are programmed for different processes, thus optimizing the time/performance ratio and allowing skilled operators to focus on the critical cycle control tasks. In some machining stages, *especially for smaller details*, servo driven processes are used and monitored by the machine operators.

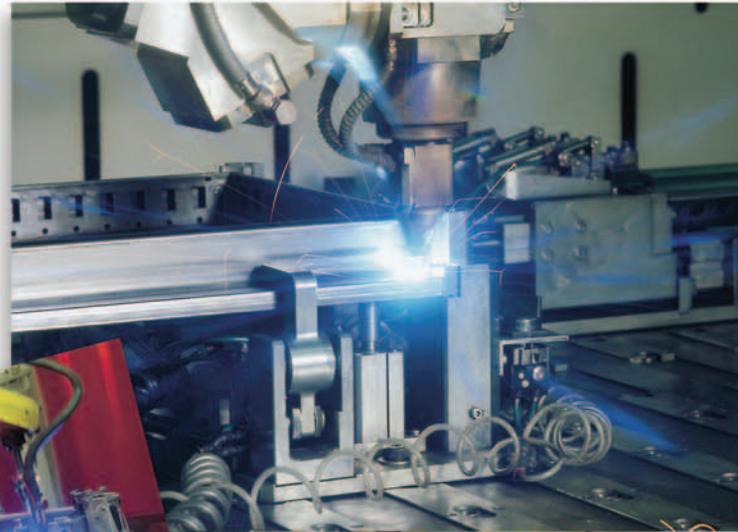

The folding facility employs advanced kinematic systems.

Welding Upon conclusion of the folding process, the material proceeds to welding, to complete the first machining stages. This is where a definitive shape is given to the structures that have made ETA enclosures and cabinets famous worldwide.

Besides the lean manufacturing work cells, on which the production cycle is based, the manufacturing facility also operates a special plant that was specifically designed for the welding of enclosures and junction boxes. One single machining line incorporates two sequentially located plants for box folding, welding and grinding. Once the process has been carried out, the raw product is ready for painting.

For the welding of our larger cabinets, automated machining stages are conducted at our laser welding plant, which is a leading innovation among control panel manufacturers. We were the first enclosure company to employ laser welding to mount the sintered steel orthogonal joint, which is an exclusive design component that is the cornerstone that has driven the success of our ARETA cabinets.

Painting

Once all preparation processes are completed, the structures proceed to the painting stage. Four progressive stages - cleaning, washing, rinsing and drying - remove all traces of dirt from the metal components. Then robotic devices deposit powder with a polyester resin base, carboxylated with epoxy resins, through electrostatic application. Oven polymerization concludes the painting cycle.

Finishing and Assembly

Painted products then move on to the next stage, where panels are subjected to gumming and placed onto the assembly lines. The machine operators then outfit them with internal and outer components, and prepare them for packaging. Once packaged, the finished products are sent to our centralized warehouse.

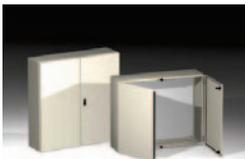

ETA metal structures require optimal finishing and packaging by our highly skilled machine operators.

ST Enclosures with Door

- Boxes for wall mounting
- EMC and stainless steel available (see pages 9&10)
- Mounting plate included
- Wall mounting brackets: SDWC-010
- Protection degree: NEMA 4/12 and IP65

ARETA Suite Cabinets

- Available as a ready to assemble 'flat pack' or fully assembled
- EMC and Stainless Steel available (see pages 9&10)
- Mounting plate to be ordered separately
- Protection degree: NEMA 12 and IP55

Accessories:

- Inner door - ATPI
- Side panels - ATFI
- 100mm high plinth - ATZ1
- Side inserted mounting plate - ATPL
- Front inserted mounting plate - ATPA (mounting accessories WTKB-002 to be ordered separately)
- Joining kit - ATKU
- Lifting eyebolts - WTGS

DIMENSIONS

To order an assembled ARETA cabinet

Example: Dimensions W = 800 x H = 2000 x D = 600 with blank front door and screwed rear panel

ARETA-082006PR

ARETA Prefix code _____
 08 The width of the cabinet _____
 20 The height of the cabinet _____
 06 The depth of the cabinet _____
 PR The cabinet composition _____

This stands for the cabinet structure with front door and screwed rear panel.

Or:

PX Cabinet with window door (from W=600 to W=1000)
 DP Cabinet with front and rear blank door.

To order a ready to assemble ARETA cabinet (Shipped as a "Flat Pack")

Example: Cabinet Dimensions W = 800 x H = 2000 x D = 600 with blank front door and screwed rear panel.

ATTF-080060

ATTF Prefix code _____
 080 The width of the cabinet _____
 060 The depth of the cabinet _____

It shows roof and bottom pre-assembled.

ATPO-080200

ATPO Prefix code _____
 080 The width of the cabinet _____
 200 The height of the cabinet _____

It shows the blank door supplied with two uprights with pre-assembled hinges and closing latches.

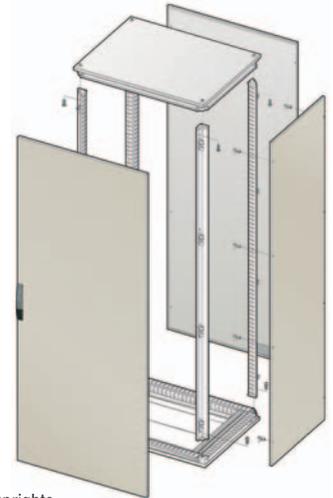

Or:

ATPX Cabinet with a window door

ATRE-080200

ATRE Prefix code _____
 080 The width of the cabinet _____
 200 The height of the cabinet _____

It shows the screwed rear panel supplied with two uprights complete with pre-assembled blocks for fixing screws.

Modular Cabinets

- Areta Modular Cabinets are available with multiple doors or with front window doors and inner panels which are hinged or screwed.
- Linea Modular Cabinets are available with window door and inner panels which are hinged or screwed.
- Cabinets with multiple doors are supplied fully assembled.
- Protection degree: NEMA 12 and IP55 (IP54 with window door)

- Front inserted mounting plate – ATPA (to be ordered separately mounting accessories WTKB-002)
- Side panels - ATEX • Plinth 100mm high - ATX1
- Joining kit – ATKU • Lifting eyebolts - WTGS

ARETA Modular In Stainless Steel

- AVAILABLE ON REQUEST FULLY ASSEMBLED WITH INNER PANELS AND FRONT PLEXI DOOR.
- 304 grade stainless steel (316 on request).
- Inner cubicles in galvanised sheet steel
- Protection degree: IP54
- To order a stainless steel enclosure in high grade AISI 316, please add "H" to the part number (e.g. ARETX-081804PRH)

Accessories:

- Side panels - ATEX • Plinth 100mm high - ATX1
- Joining kit – ATKU • Lifting eyebolts - WTGS

ARETA PC In Stainless Steel with Pull-out Keyboard

- AVAILABLE ONLY FULLY ASSEMBLED
- 304 grade stainless steel (316 on request).
- Supply includes top glazed door for monitor viewing, pull-out keyboard drawer with mouse support, lower door, rear door, monitor support.
- Protection degree: IP55
- To order a stainless steel enclosure in high grade AISI 316, please add "H" to the part number (e.g. ATPCX-061806CEH)

Accessories:

- Side panels - ATEX • Plinth 100mm high - ATX1
- Joining kit – ATKU • Lifting eyebolts - WTGS

ATB8 Stainless Steel Monobloc Cabinets

- Fully welded structure, same technical features of the cabinet offered in mild steel.
- Removable rear panel
- 304 grade stainless steel (316 on request).
- Mounting plate to be ordered separately.
- Protection degree: IP55.

Accessories:

- Front inserted mounting plate – ATPA (to be ordered separately mounting accessories WTAC-002)
- Plinth 100mm high – ATX6
- Lifting eyebolts - WTGS

STX/STPX Stainless Steel Boxes

- Stainless steel boxes are manufactured using the same construction and productive concept of the ST – STP mild steel range.
- Available with blank or transparent door.
- 304 grade stainless steel (316 on request).
- Supply includes mounting plate.
- Protection degree: IP65 for boxes with blank door. IP55 for boxes with plexi door

To order a stainless steel box in high grade AISI 316, please add "H" to the part number (e.g. STX2-315H)

SDX Stainless Steel Terminal Boxes

- 304 grade stainless steel (316 on request).
- Mounting plate to be ordered separately.
- Protection degree: IP55.

ZBX Stainless Steel Monobloc Control Desks

- Supply includes mounting plate.
- 304 grade stainless steel (316 on request).
- Protection degree: IP55.

Accessories:

- Plinth 100mm high – ZCX4

AEX- LEX-PEX-MEX Stainless Steel Modular Control Desks

- Stainless steel modular control desks are manufactured using the same construction and productive concept of the mild steel range.
- 304 grade stainless steel (316 on request).
- Supply includes mounting plate.
- Protection degree: IP55.

Accessories:

- Plinth 100mm high – ZCX4
- Cover TLX

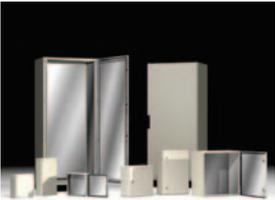

Bioniq Suspension Arm System for Operator Interface Panels

New "BIONIQ" suspension arm and Control panel system provides greater operator flexibility and accessibility for Operator Interface systems that need to be suspended from a machine tool or other process control applications. Key features of this innovative product line include:

- Light-weight extruded aluminum tube
- Contemporary design with an eye-catching color contrast
- Versatile movement of the arm system provides an ideal viewing angle for the operator
- Operator housing BQC and keyboard housing BQK are customized according to customer requirements
- Suspension arm BQPA with different solutions allowing mounting from the top or the side of the enclosure.
- Application on pedestal available on request
- Economic solution BST available on request
- Protection degree: IP55

EMC Solutions

The growing electromagnetic pollution and international standards require electro-magnetic shielding. The European EMC 89/336 directive affects electric and electronic equipment, which can create or be subject to electromagnetic disturbances. In order to meet the directive and offer an effective solution, a specific ARETA cabinet has been designed for EMC applications.

Thermal Management

A wide range of products are offered. Compact as well as ultra-thin conditioners, air-water heat exchangers, heaters and control devices (thermostats and hygrostats) and filter fans of top class design.

Customization

We understand that offering standard "off the shelf" enclosures is not always sufficient to meet customer requirements. Our advanced manufacturing systems and dedicated engineering allows us to adapt our standard products to include various modifications.

Software

"Quadroplan" software is a valid aid for designers and board manufacturers, since it enables the user to perform a correct dimensioning of the board enclosure, to overtemperature purposes, inspection of the dynamic stresses of busbars and short circuit withstand, in compliance with the standards.

"ETA CAD" features, included in this software, allow the positioning of holes and cut-outs to our standard products directly from the customer's PC. Information is then transferred over the internet directly to our factory floor.
